

HTML&CSS Project requirements (Individual):

- 1- don't use table in your project
- 2- make your layout look great using html and css only, all pages will display in the same page.
- 3- contain about 7 pages (or more if you need).
- 4- page 1 => for your home page, you can add anything in this page for example an image with some info about you
- 5- page 2 => for your hobbies page and it will contain some images describing your hobbies and when you hover on each image it's zooming
- 6- page 3 => for your birthday, and it will contain an image after 5 sec the content will change to be a textarea with submit button so user can write a kind msg for you, after submit redirect to page for thank user but in the same layout

7- page 4 => contact us page and it will contain a form, you can use the form that we created before, and add images for your social media accounts.

8- page 5 => contain a slider for some images for countries that you wish to visit it, above each image the name of this country.

9- page 6 => your cv page and it will contain your personal info, your skills,etc.

note: you can change the content but using the same rules
